LUNATIC MOBILE FORENSICS 0.1.0

MOBILE FORENSIC EXAMINATION REPORT

Operation SYNTHESE (demonstration)

Case identifier	LMF-2026-28541B
Status	open
Case owner	j.examiner
Legal authority	Synthetic requisition SYN-2026-001
Generated	2026-10-10 14:26:16 CEST by j.examiner
Timezone used	Europe/Paris
Evidence sources	10
Artefacts	110

1. Scope of the investigation

Legal authority / mandate: Synthetic requisition SYN-2026-001

Scope: Smartphone of the fictitious person 'Alex Martin': communications 2026-03-14 to 2026-03-17

Description: Fully synthetic demonstration case. All persons, numbers and messages are fictitious.

2. Devices

Label	Platform	Model	OS	Identifiers	Access level	Authorisation	Acquired	Limitations
android device (EV-E629DC54)	android				logical backup (unencrypted)			Content limited to what the backup mechanism includes; No physical/file-system level access
iPhone synthetique	ios	iPhone15,2	17.4	serial_number: SYNTHSERIAL01, udid: 00000000000000000000000000000000000000000000, phone_number: +33639980000	logical backup (unencrypted)			Content limited to what the backup mechanism includes; No physical/file-system level access

Parsers applied

Parser	Version	Status	Records	Description
android.adb_getprop	1.0	stable	1	Device properties collected with 'adb shell getprop'.
android.adb_packages	1.0	stable	3	Installed packages listed with 'adb shell pm list packages -f'.
android.calendar	1.0	stable	2	Events from Android CalendarProvider (calendar.db).
android.calllog	1.0	stable	4	Call history from Android CallLogProvider (calllog.db or contacts2.db).
android.contacts	1.0	stable	4	Contacts from Android ContactsProvider (contacts2.db).
android.sms	1.1	stable	8	SMS and MMS text from Android TelephonyProvider (mmssms.db).
apps.inventory	1.0	stable	6	Application inventory from file paths
browser.chromium_bookmarks	1.0	stable	1	Chromium 'Bookmarks' JSON file.
browser.chromium_cookies	1.0	stable	1	Chromium cookie metadata (encrypted values are not decrypted).
browser.chromium_history	1.0	stable	4	Chromium-based browser history and downloads.
documents.metadata	1.0	stable	2	Office (OOXML/ODF) and PDF documents: metadata, hashes, text indexing where possible.
documents.text_index	1.0	stable	4	Fallback text indexing for text/CSV/JSON/XML files without a specific parser.
export.google_location_history	1.0	partial	2	Google location history exports: Takeout Records.json and on-device Timeline export (rawSignals / timelinePath).
export.gpx	1.0	stable	2	GPS Exchange Format tracks and waypoints.
export.icalendar	1.0	stable	2	iCalendar exports (RFC 5545): VEVENT and VTODO.
export.lunatic_exchange	1.0	stable	5	LUNATIC exchange format (JSON or CSV) documented in docs/exchange_format.md.
export.sms_backup_restore_xml	1.0	stable	3	XML exports of the 'SMS Backup & Restore' Android app (<smses>, <calls>).

Parser	Version	Status	Records	Description
export.vcard	1.0	stable	2	vCard 2.1/3.0/4.0 contact exports (RFC 6350).
ios.addressbook	1.0	stable	3	Contacts from iOS AddressBook.sqlitedb.
ios.calendar	1.0	stable	1	Events from iOS Calendar.sqlitedb.
ios.callhistory	1.0	stable	4	Calls (cellular, FaceTime, third-party CallKit) from iOS CallHistory.storedata.
ios.notes	1.0	partial	2	Apple Notes: NoteStore.sqlite (text only) and legacy notes.sqlite.
ios.photos_db	1.0	stable	2	Asset records and stored GPS coordinates from iOS Photos.sqlite.
ios.sms	1.1	stable	7	SMS / iMessage / RCS from iOS sms.db (HomeDomain/Library/SMS/sms.db).
logs.system	1.0	stable	3	Exported system logs: Android logcat (threadtime), BSD syslog, ISO-8601 timestamped lines.
media.metadata	1.0	stable	2	Image/video/audio files: SHA-256, EXIF (camera, dates, GPS), MP4/QuickTime metadata.
messaging.whatsapp_android	1.0	partial	4	WhatsApp for Android decrypted msgstore.db (legacy 'messages' and current 'message' schemas).
messaging.whatsapp_ios	1.0	partial	2	WhatsApp for iOS ChatStorage.sqlite.
recovery.file_carving	0.1	experimental	2	EXPERIMENTAL: signature-based carving (JPEG, PNG, PDF) in raw disk/partition images.
recovery.sqlite_residual	0.1	experimental	22	EXPERIMENTAL: text fragments in SQLite free pages / unallocated space / freeblocks / WAL.

6. Correlations

Observed facts (21)

Rule	Description	Artefact refs
duplicate_content	9 app records share identical normalised content (timestamp, identifiers, body) across 3 evidence source(s).	11, 12, 13, 54, 55, 56, 70, 71, 94
duplicate_content	2 contact records share identical normalised content (timestamp, identifiers, body) across 2 evidence source(s).	65, 79
duplicate_content	3 contact records share identical normalised content (timestamp, identifiers, body) across 3 evidence source(s).	66, 80, 100
duplicate_content	2 contact records share identical normalised content (timestamp, identifiers, body) across 2 evidence source(s).	67, 81
duplicate_content	3 message records share identical normalised content (timestamp, identifiers, body) across 3 evidence source(s).	57, 72, 97
duplicate_content	3 message records share identical normalised content (timestamp, identifiers, body) across 3 evidence source(s).	58, 73, 98
duplicate_content	2 call records share identical normalised content (timestamp, identifiers, body) across 2 evidence source(s).	26, 82
duplicate_content	3 message records share identical normalised content (timestamp, identifiers, body) across 3 evidence source(s).	59, 74, 99
duplicate_content	2 message records share identical normalised content (timestamp, identifiers, body) across 2 evidence source(s).	60, 75
duplicate_content	2 call records share identical normalised content (timestamp, identifiers, body) across 2 evidence source(s).	27, 83
duplicate_content	2 call records share identical normalised content (timestamp, identifiers, body) across 2 evidence source(s).	28, 84
duplicate_content	2 message records share identical normalised content (timestamp, identifiers, body) across 2 evidence source(s).	61, 76
duplicate_content	2 message records share identical normalised content (timestamp, identifiers, body) across 2 evidence source(s).	62, 77
duplicate_content	2 call records share identical normalised content (timestamp, identifiers, body) across 2 evidence source(s).	29, 85
contact_shared_identifier	4 contact records (Bob Durand) share identifier(s) +33639980001: merge candidates (same person is an interpretation).	65, 68, 79, 107
contact_shared_identifier	3 contact records (Claire Petit) share identifier(s) +33639980002, claire.petit@example.org: merge candidates (same person is an interpretation).	66, 80, 100
contact_shared_identifier	3 contact records (Dan Lefevre, Dan Lefèvre) share identifier(s) +33639980003: merge candidates (same person is an interpretation).	67, 81, 101
identifier_matches_contact	Identifier +33639980001 used in 18 communication(s) equals the identifier stored in contact record(s): Bob Durand.	65, 68, 79, 107, 57, 72, 97, 58, 73, 98, 26, 82, 20, 21, 23, 28, 84, 61, 76, 62, 77, 108
identifier_matches_contact	Identifier +33639980002 used in 9 communication(s) equals the identifier stored in contact record(s): Claire Petit.	66, 80, 100, 59, 74, 99, 60, 75, 27, 83, 64, 22
identifier_matches_contact	Identifier +33639980003 used in 7 communication(s) equals the identifier stored in contact record(s): Dan Lefevre, Dan Lefèvre.	67, 81, 101, 63, 95, 96, 104, 105, 29, 85
identifier_matches_contact	Identifier dan.lefevre@example.org used in 1 communication(s) equals the identifier stored in contact record(s): Dan Lefevre.	67, 81, 78

Hypotheses (analytical leads) (19)

Rule	Description	Artefact refs
call_message_proximity	Call with +33639980001 at 2026-03-14T08:10:00+00:00 and 6 message(s) with the same counterpart within ±15 min. Possible related exchange - to be validated by the examiner.	26, 57, 72, 97, 58, 73, 98
call_message_proximity	Call with +33639980001 at 2026-03-14T08:10:00+00:00 and 6 message(s) with the same counterpart within ±15 min. Possible related exchange - to be validated by the examiner.	82, 57, 72, 97, 58, 73, 98

Rule	Description	Artefact refs
call_message_proximity	Call with +33639980001 at 2026-03-15T09:58:00+00:00 and 5 message(s) with the same counterpart within ±15 min. Possible related exchange - to be validated by the examiner.	28, 23, 61, 76, 62, 77
call_message_proximity	Call with +33639980001 at 2026-03-15T09:58:00+00:00 and 5 message(s) with the same counterpart within ±15 min. Possible related exchange - to be validated by the examiner.	84, 23, 61, 76, 62, 77
call_message_proximity	Call with +33639980002 at 2026-03-14T09:15:00+00:00 and 5 message(s) with the same counterpart within ±15 min. Possible related exchange - to be validated by the examiner.	27, 59, 74, 99, 60, 75
call_message_proximity	Call with +33639980002 at 2026-03-14T09:15:00+00:00 and 5 message(s) with the same counterpart within ±15 min. Possible related exchange - to be validated by the examiner.	83, 59, 74, 99, 60, 75
call_message_proximity	Call with +33639980003 at 2026-03-16T10:05:00+00:00 and 1 message(s) with the same counterpart within ±15 min. Possible related exchange - to be validated by the examiner.	105, 104
spatio_temporal_proximity	location and media records located 97 m apart within 5.0 min. Co-location is an analytical inference.	52, 1
spatio_temporal_proximity	location and location records located 97 m apart within 5.0 min. Co-location is an analytical inference.	52, 89
spatio_temporal_proximity	location and message records located 102 m apart within 6.0 min. Co-location is an analytical inference.	52, 23
spatio_temporal_proximity	location and media records located 0 m apart within 3.0 min. Co-location is an analytical inference.	5, 1
spatio_temporal_proximity	location and location records located 0 m apart within 3.0 min. Co-location is an analytical inference.	5, 89
spatio_temporal_proximity	location and message records located 5 m apart within 4.0 min. Co-location is an analytical inference.	5, 23
spatio_temporal_proximity	media and location records located 0 m apart within 0.0 min. Co-location is an analytical inference.	1, 89
spatio_temporal_proximity	media and message records located 5 m apart within 1.0 min. Co-location is an analytical inference.	1, 23
spatio_temporal_proximity	media and location records located 7 m apart within 1.0 min. Co-location is an analytical inference.	1, 53
spatio_temporal_proximity	location and message records located 5 m apart within 1.0 min. Co-location is an analytical inference.	89, 23
spatio_temporal_proximity	location and location records located 7 m apart within 1.0 min. Co-location is an analytical inference.	89, 53
spatio_temporal_proximity	message and location records located 11 m apart within 0.0 min. Co-location is an analytical inference.	23, 53

Temporal inconsistencies (2)

Rule	Description	Artefact refs
embedded_vs_filesystem_time	Embedded capture time differs from file modification time by 5019 h (may result from copy/transfer, editing or clock settings).	1
embedded_vs_filesystem_time	Embedded capture time differs from file modification time by 5018 h (may result from copy/transfer, editing or clock settings).	2

7. Examiner observations and conclusions

[FACT] Meeting arranged with Bob Durand

Outgoing messages set a meeting 'at 10h in front of the station' with +33639980001.

By j.examiner on 2026-10-10 14:26:16 CEST - supporting artefacts: #58, #73, #98

[FACT] Calls with the same counterpart

Call log entries with +33639980001 on 2026-03-14 and 2026-03-15.

By j.examiner on 2026-10-10 14:26:16 CEST - supporting artefacts: #26, #28, #82, #84

[INTERPRETATION] Device near the station on 2026-03-15

Photo EXIF GPS and location history place the device around 48.844 N, 2.374 E at about 10:55 UTC.

By j.examiner on 2026-10-10 14:26:16 CEST - supporting artefacts: #1, #2, #5, #23, #52, #53, #89

[HYPOTHESIS] The planned meeting took place

Consistent with the communications and locations above, but not demonstrated by the data.

By j.examiner on 2026-10-10 14:26:16 CEST - supporting artefacts: none

8. Technical limitations

- Only data present in the imported sources is reported. Absence of an artefact does not prove it never existed.
- Logical/backup acquisitions do not include all device data (app sandboxes, system areas, deleted space).
- No lock-screen bypass, exploit, encryption circumvention or remote account access was performed.
- Timestamps are converted to UTC using the documented method shown per record; naive times assume the case timezone.
- Phone number normalisation is heuristic (default country code) and must be checked against the raw value.
- SHA-256 hashes demonstrate that preserved bytes did not change since import; they do not alone establish authenticity or legal admissibility.
- Recovered/residual data (experimental module) consists of fragments with low confidence that require manual validation.
- Correlations of kind 'hypothesis' are analytical leads, not established facts.
- Device 'android device (EV-E629DC54)': Content limited to what the backup mechanism includes
- Device 'android device (EV-E629DC54)': No physical/file-system level access
- Device 'iPhone synthetique': Content limited to what the backup mechanism includes
- Device 'iPhone synthetique': No physical/file-system level access
- Parser export.google_location_history is 'partial': results may be incomplete.
- Parser ios.notes is 'partial': results may be incomplete.
- Parser messaging.whatsapp_android is 'partial': results may be incomplete.
- Parser messaging.whatsapp_ios is 'partial': results may be incomplete.
- Parser recovery.file_carving is 'experimental': results may be incomplete.

- Parser recovery.sqlite_residual is 'experimental': results may be incomplete.

9. Audit trail

Hash-chained audit log: INTACT (64 entries). Head hash: 532c8ba6be1502ad8b4f1a28f71b89c2638abb18983420c9dca5a877aacdae10
